ceilings, serviced by two overhead cranes. In-house shearing, rolling, forming and machining allow us to closely monitor each facet of a project, ensuring quality control at each stage.

Our progressive and innovative company employs some 30 full-time tradesmen, a full-time engineering and drafting department in addition to a quality control supervisor. We are certified with the Canadian Welding Bureau and hold an **ASME U** Stamp from the National Board for the fabrication of pressure vessels up to 3,000 psi.

Custom Manufacturing

In the area of pressure vessels - a specialty of PSI - we work in T304

and T316L Stainless Steel, Carbon Steel and Inconel. We can handle vessels up to 16' in diameter and up to 60' long/high.

PSI can work from a customer's certified designs or we can design your requirement using the services of professional engineers.

A variety of finishes can be accommodated, ranging from mill to 20RA, including various coatings. Our experience includes vessels ranging from water filtration to UHT milk sterilization, from carbonated beverage products to blending tanks and from vacuum degassing towers to chemical process reactors.
